

Artificial Intelligence

That Makes Your Smartphone Smarter

What is Artificial Intelligence?

Machine that think and act like human do.

Machine that solve difficult problems.

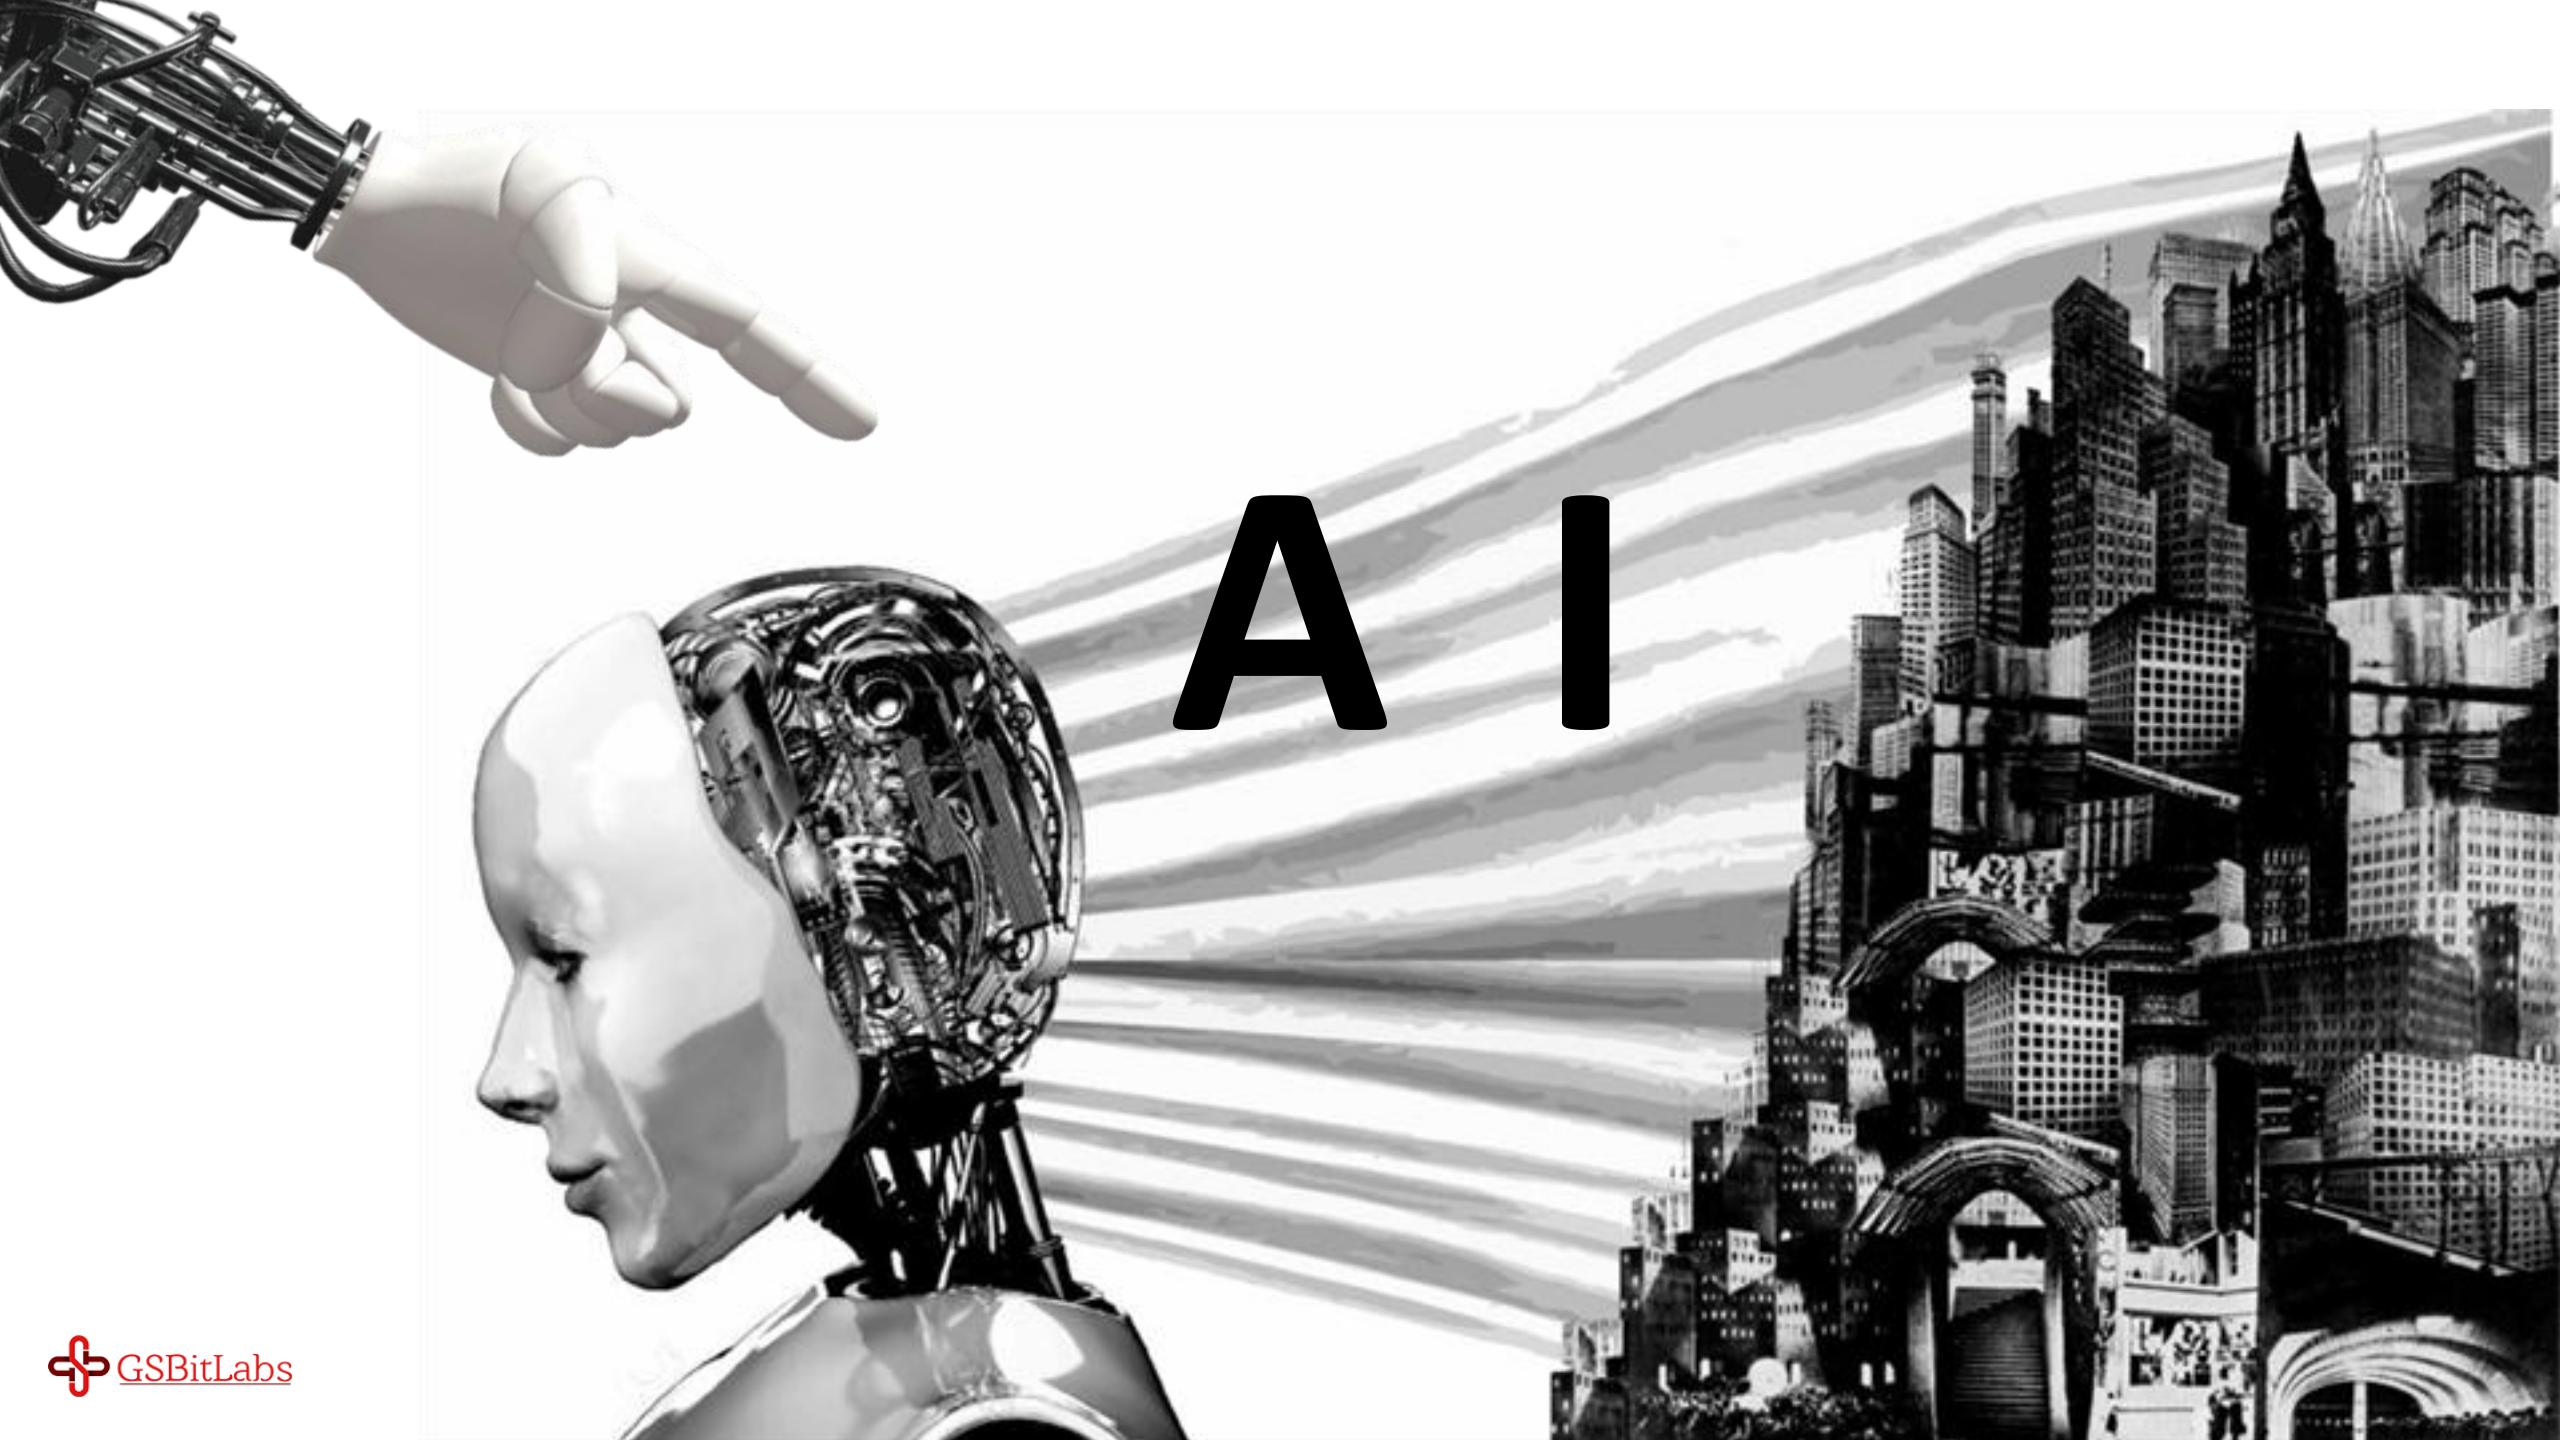

According to Google I/O 2018 Keynote

This is fascinating to watch. This is the next level of AI that will make calls for you...book a meeting space, appointment, shave and a haircut... yes, on a phone.

It will then add it to your calendar and send you reminders... Imagine if you could give the task of booking restaurants, hair appointments, and any other 'generic' activity away.

This is an amazing conversational utility that takes the mundane away from the day to day & much more in this keynote.

Advantages A.I.

- It can help improve our way of life
- They can think logically without emotions, making rational decisions with less or no mistakes.
- They don't need to sleep, rest, take breaks, or get entertained, as they don't get bored or tired.
- Replace humans in repetitive, tedious tasks and in many laborious places of work.
- Mental alertness and decision making capabilities.
- Use robots for heavy construction, military benefits, or even for personal assistance at homes.

Role of Artificial Intelligence in mobile app development

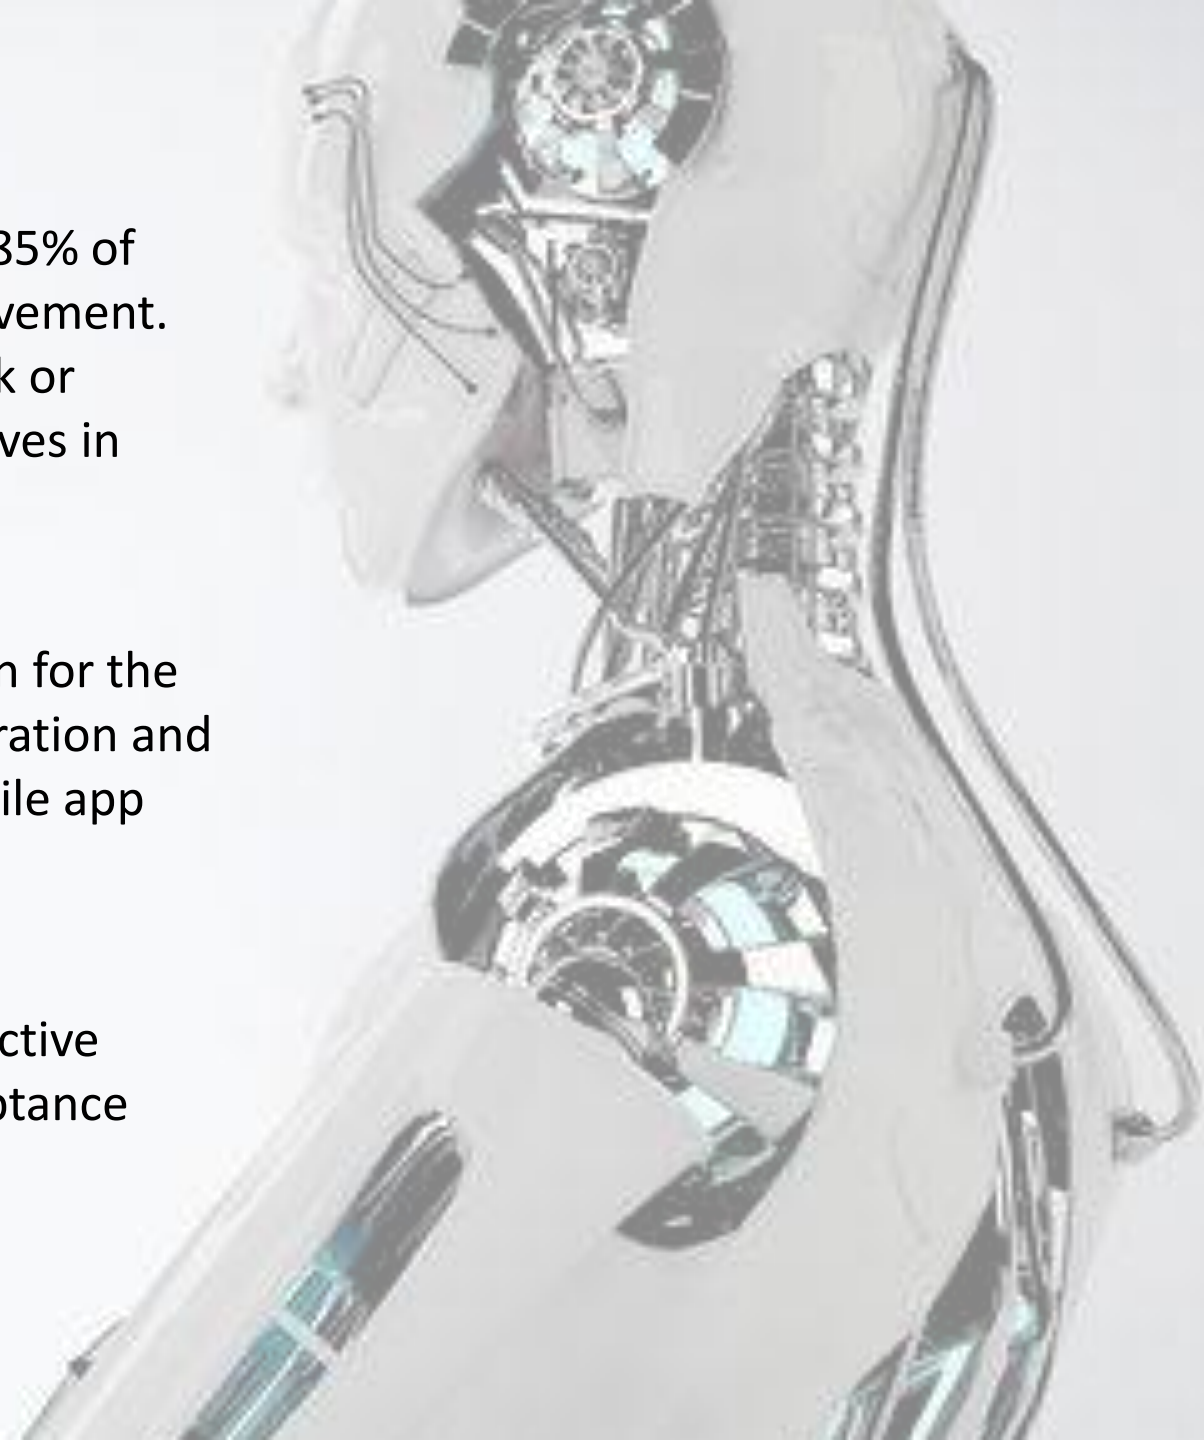

Artificial Intelligence is persistently being used for the last two years to bring a significant change in our daily lives & allows users to take control of regular chores. AI in mobile apps has been transforming the user experience, giving growth to the business and it is predicted that this year AI will set new benchmarks in [Mobile App development](#) for iOS & Android.

In a recent report by Gartner, it is stated that by 2020, 85% of consumer interaction will happen with no human involvement. Artificial Intelligence has already assisted us in our work or enhancing our day-to-day experience, integrating our lives in different & exciting ways.

Artificial Intelligence (AI) is not only a topic of discussion for the innovators in the science field, but also a topic of exploration and expansion in the business industry, specifically the mobile app industry.

With over 20 million downloads and 5 million monthly active users, tracking app on the market it has seen wide acceptance

Technology has no limitations, it is just to be used in an innovative way to stand out in the competitive market.

Thank You !!
